Create an EC2 Linux Instance in AWS

Kaviyasri. R

**ECE-Electronics and Communication Engineering,
Kongu Engineering College,
Erode.**

Objective

EC2 (Elastic Compute Cloud) is a core service provided by Amazon Web Services (AWS) that enables users to rent virtual servers in the cloud to run applications, store data, or handle computational workloads.

An EC2 Linux instance is a virtual machine running the Linux operating system on Amazon Web Services (AWS) EC2 (Elastic Compute Cloud). This allows you to run Windows-based applications, manage Windows Server configurations, and use various Microsoft software (like SQL Server, Apache, File Server etc.) in the cloud without having to manage physical hardware.

Use Cases for EC2 Linux Instances:

- **Web and Application Hosting:** Run Apache web servers or other Linux-based web applications in the cloud.
- **Database Servers:** Host SQL Server databases with EC2 Linux instances, using SSH or EC2 for more control.
- **Remote Desktop Applications:** Set up SSH (Remote Desktop Services) for remote access to Linux desktops in the cloud.
- **Development and Testing:** Create development environments with linux OS to test php, MySql or other Linux-based applications.

Used Services in AWS

Amazon EC2

Topology

Execution Tasks:

LAUNCH OF INSTANCE ON LINUX

The screenshot shows the AWS Management Console interface for the 'us-east-1' region. The breadcrumb navigation indicates the path: EC2 > Instances > Launch an instance. A green success banner at the top states: 'Success Successfully initiated launch of instance (i-02d90f3c4e1252822)'. Below this is a 'Launch log' section. A 'Next Steps' section contains a search bar and a list of actions: '1', '2', '3', '4', '5', '6'. Four recommended actions are displayed in cards: 'Create billing usage alerts', 'Connect to your instance', 'Connect an RDS database', and 'Create EBS snapshot policy'. The footer includes links for CloudShell, Feedback, Console Mobile App, and copyright information for Amazon Web Services, Inc. or its affiliates.

The screenshot shows the AWS Management Console interface for the 'us-east-1' region, displaying the details of a specific EC2 instance. The breadcrumb navigation indicates the path: EC2 > Instances. The instance list shows one instance, 'Linux-K', with ID 'i-02d90f3c4e1252822', in a 'Running' state, of type 't3.micro'. The instance details section for 'i-02d90f3c4e1252822 (Linux-K)' includes an 'Instance summary' with the following information:

Instance ID	Public IPv4 address	Private IPv4 addresses
i-02d90f3c4e1252822	98.83.153.84 open address	172.31.38.130

Other details shown include the 'Instance state' as 'Running' and the 'Public DNS' as 'i-02d90f3c4e1252822.elb.us-east-1.amazonaws.com'. The footer includes links for CloudShell, Feedback, Console Mobile App, and copyright information for Amazon Web Services, Inc. or its affiliates.
